In [ ]:

```
"""
Que 1-Explain GET and POST methods.
Ans 1-GET

is used to request data from a specified resource.

Post

POST is used to send data to a server to create/update a resource.

Que 2-Why is request used in Flask?

The Request, in Flask, is an object that contains all the data sent from the
Client to Server. This data can be recovered using the GET/POST Methods

Que 3-Why is redirect() used in Flask?

Ans 3-Flask class has a redirect() function. When called, it returns a response
object and redirects the user to another target location with specified status
cod

Que 4-What are templates in Flask?Why is the render_template() function used?
Ans 4-Templates are files that contain static data as well as placeholders for
dynamic data

Flask provides us the render_template() function which can be used to render
the external HTML file to be returned as the response from the view function.
